ANDoc PDF Import Fixture

This document tests local PDF conversion into a single machine-readable ANDoc package. The importer should preserve page provenance, headings, paragraphs, and semantic tables.

Conversion Results

Surface	Representation	Editable
Human	Rendered document	Yes
Agent	Typed blocks and transactions	Yes
Export	PDF projection	Re-import required

Agent Experience

An agent should address a stable block ID rather than guessing a page coordinate. Every imported block should point back to its source page and bounding box when available.

Second Page

Revision Safety

Human and agent edits use the same revision-checked transaction stream. A stale edit must fail before mutation.

Original Source

The source PDF remains embedded in the ANDoc package under sources so an agent can audit or reprocess it later.
